

In a bid to tackle climate-warming emissions, the UK Government is committed to delivering zero-carbon homes by 2025 through their Future Homes Standard.

The aim is to radically improve the energy performance of new homes in England to ensure they are future-proofed with **low carbon heating** and **high levels of energy efficiency**.

It is due to come into effect in 2025 and will ensure that new homes in England produce at least 75% lower CO2 emissions compared to those built to current standards.

By choosing materials that conserve energy you can reduce the environmental impact of a building throughout its lifetime.

Saint-Gobain has an extensive range of solutions and services to help house builders meet bespoke energy efficiency requirements.

## Future Homes Standard: In numbers

### 2025

year when the Future Homes Standard will be implemented

### 31%

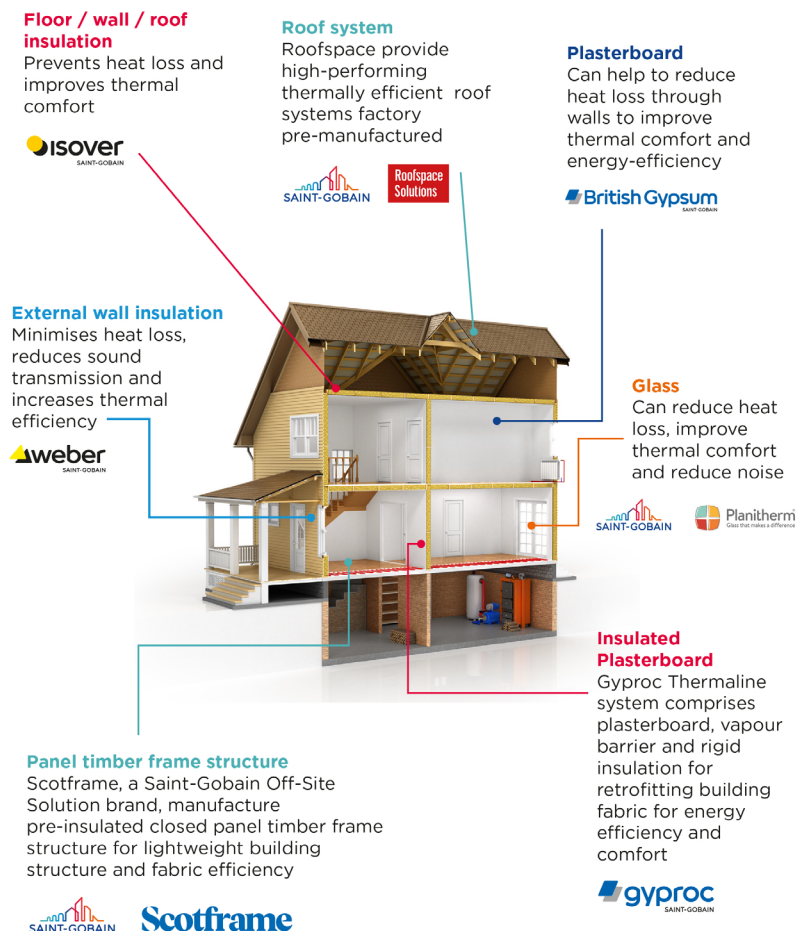

reduction in carbon emissions that new homes produce by June 2022

### 2022

### 75%-80%

reduction in carbon emissions produced by new homes by

### 2025

Find out more about the standard and how Saint-Gobain can help you to achieve its energy-efficiency requirements in our [Guide to the Future Homes Standard](#).
